

Climate Ticker

API mobilité

Climate Ticker - Movement for **local climate** policy success

The Climate Ticker project aims to create a **nationwide movement** for climate policy participation at the local level that enables climate-conscious organisations and **individuals to demand data-validated measures in cantons and municipalities.**

Problem definition

At the national level, progress on climate policy is very slow

thousands of climate-aware (locally non-mobilized) individuals

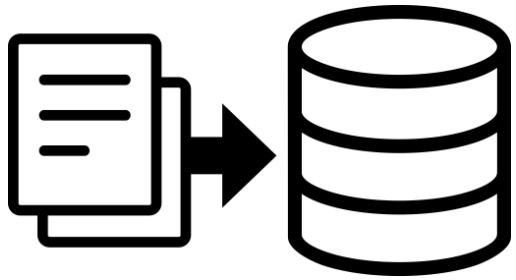

Switzerland's federal system: cantons (44%) and municipalities (22%) hold two-thirds of Switzerland's public funds

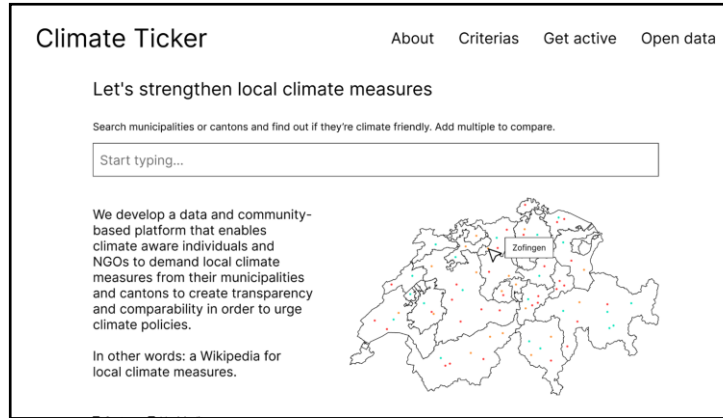

lack of foundations and opportunities to get involved efficiently, effectively and systemically

Our project

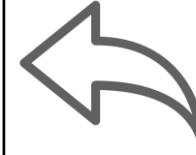

EVALUATION

collecting **local data** for climate change, mitigation and adaptation API automated and by questionnaire

PLATFORM

public & **transparent access** to a local climate evaluation for individuals, media, communes and scientist and offers different engagement forms

ENGAGEMENT

different forms and motivational level of political and social pressure, which have an effective impact on local climate policy.

Indicators covering 9 different themes where local climate policies can be improved :

Mobility

Electricity and gas

Buildings

Economic activity

**Food and
consumption
goods**

**Agriculture and
Ecosystems**

Financial sector

Governance

**Transition and
adaptation**

Data needed !

Cycle tracks	% km-roads with acceptable quality cycle tracks	Municipality / Canton
Public transport subsidies	Total yearly subsidies to public transport companies, per inhabitant	Municipality / Canton
Public transport trend	Change in total number public transport passengers compared to previous year	Municipality / Canton
Road traffic trend	Change in average daily traffic compared to previous year (cantonal roads)	Municipality
Motorway traffic trend	Change in average daily traffic compared to previous year	Canton
